

LONG TERM PAVEMENT PERFORMANCE PROGRAM DIRECTIVE

For The Technical Direction Of The LTPP Program

Program Area: Monitoring

Directive Number:

AWS-8

Date: August 11, 1997

Supersedes:

AWSCheck v1.2

Subject: Upgrade of AWSCheck Software to Version 1.2a

This new version of the AWSCheck software contains modifications made in response to feedback from the RCOs. More specifically, the following modification was made in this program version:

- < Monthly average relative humidity values between 100% and 103% are converted to (limited to a maximum of) 100% (see AWSPR NA-05).

The above modification does not require changes to the documentation; hence, the Users Guide provided with the AWSCheck v1.1 software remains unchanged.

AWSCheck v1.2a should be installed on all computers being used to enter and process AWS data. Installation consists of copying the file AWSINSTL.EXE off the distribution diskette and into the AWSCheck directory. Once done, run the AWSINSTL.EXE program and answer "yes" to overwrite existing program files. If this procedure is followed, the AWSCheck program should be able to read and process all data previously entered and processed with 1.2 or earlier version of the AWSCheck program.

- Note:
- (1) AWSCheck v1.2a is fully comparable with v1.2 and does not require any reprocessing of AWS data or EDT files. However, upload files need to be re-created because the referenced modification could affect the relative humidity statistics for those months where the daily relative humidity consistently falls between 100% and 103%.
 - (2) This version of the program is to be used for data not already loaded into the IMS. No reprocessing of data previously loaded into the IMS with the AWSCheck program is needed. Instructions, programs and procedures were issued under separate cover (with IMS NT Version 1.3) to correct AWS data previously filtered into the IMS.

If there are any problems, please submit a AWS problem report (AWSPR) form in accordance with LTPP Monitoring Directive AWS-3.
